

Trials at the Speed of Technology

eDiaryLink™ ePRO

Introduced in 2000, DSG's eDiaryLink provides a flexible and reliable approach to patient reported data capture. Designed with the subject in mind, eDiaryLink offers multiple language settings, larger fonts for special populations, validated electronic VAS scales, and body diagrams. DSG's capabilities for electronic patient reported studies span more than 20 therapeutic areas around the globe.

With the fastest implementation on the market and set-ups requiring on average only four to five weeks, eDiaryLink integrates seamlessly with eCaseLink, and data is available for review in real time including monitoring of subject compliance.

eDiaryLink is available for stand-alone deployment or in combination with eCaseLink for data entry, reporting, and data analysis.

Easy Review of Information

eDiaryLink enables sponsors to review subject data prior to visits, saving valuable time at the site. Data is displayed both in reports as well as within eCaseLink's unique CRF screens, so an investigator can view the diary data in the format to which they are accustomed.

Subject Compliance

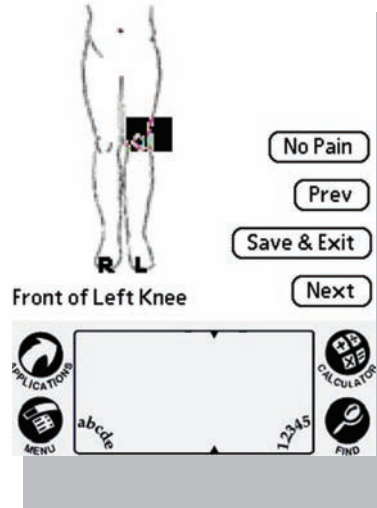

An intuitive screen design based on Palm® or Microsoft® technology makes it easy for study subjects to enter data. DSG also offers subjects a choice between hand-held devices or a Web-enabled application to capture subject response.

Subject compliance is increased through pre-programmable alarms and date-time stamps to ensure subjects enter data when required.

DSG's eDiaryLink™ Features:

- ePRO deployment experience since 2000
- Multi-language capabilities including Asian character sets
- Electronic PDA or Web-based interfaces with a single database
- Mid-study changes without interruption to the study or subject
- Edit checks to ensure accurate data collection
- Wireless data transfers worldwide if a landline is not available
- A modem-equipped cradle which offers an efficient, secure connection for gathering data from trial participants while simultaneously charging the handheld's battery
- A flash memory device that provides back-up of data in cases of accidental hardware damage. Data is always recoverable in cases of device damage
